

ReGen Green+ Liquid Seaweed Extract

Regen Green+ is a highly concentrated extract of Laminaria seaweed, rich in natural carbohydrates, alginic acids, and bioactive compounds.

**Beneficial
for year
round
application**

**RATE: Only
5 litres per
hectare -
due to its
extremely high
concentration.**

**COVERAGE:
One 200 litre
barrel treats 40
hectares.**

ReGen Green+ provides vital carbohydrates and natural growth hormones that help turf recover from shade, drought, and cold stress.

Improved Nutrient Efficiency: Low acidic pH (3.5-4.5) prevents alkaline hydrolysis of mixed chemical products, maintaining their full activity.

Synergistic Action: The natural sticking effect of alginic acid enhances the efficacy of tank-mixed treatments, reducing the need for higher doses of PPPs (Plant Protection Products).

Environmental Protection: Lower PPP use reduces residues, environmental risk, and input costs — achieving a perfect synergy between performance and sustainability.

Root & Seedling Support: Ideal for summer-stressed fairways or newly seeded areas, promoting deeper rooting and faster establishment.

Application & Efficiency

Rate: Only 5 litres per hectare - due to its extremely high concentration.

Coverage: One 200 litre barrel treats 40 hectares.

Cost-Effective: Low-rate, high-performance formula offering exceptional value per hectare.

SUMMER

- Drought stress recovery
- Nutrient efficiency
- Plant health and Microbial activity

WINTER

- Enhanced Stress Tolerance
- Improved root heath recovery
- Sustained plant health colour

Contact us today to secure your stock for the autumn programme and give your turf the **ReGen Green+** advantage.
